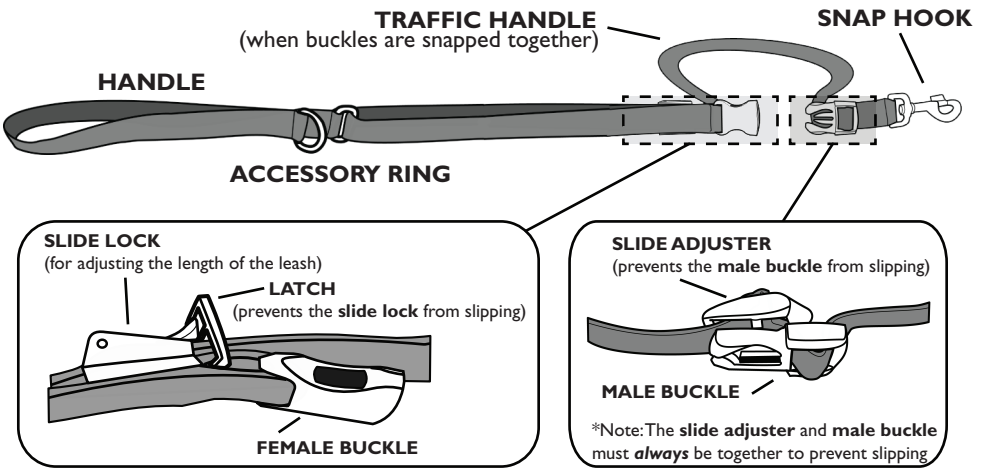
Convertible Leash System

User Manual

by GEAR·WISE

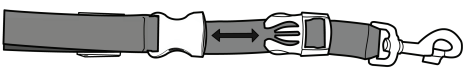
GETTING TO KNOW YOUR LEASH:



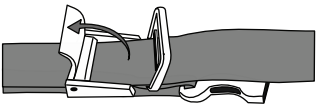
HOW TO USE YOUR LEASH:

To adjust the length:

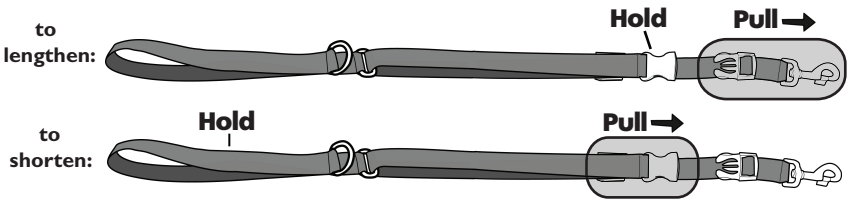
1. Unclip the **buckle**



2. Open the **slide lock**



3. Hold and pull (as shown below) until you reach your desired length



4. Close the **slide lock** as tightly as possible to prevent slipping. You can do this by pressing down on the lever with your thumb while pulling the strap backwards (as shown below).

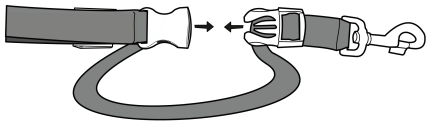
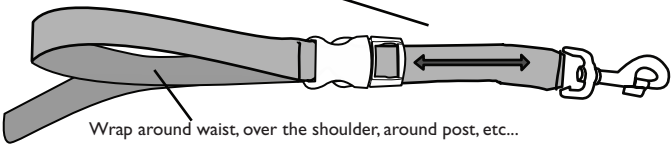
Traffic Handle:

Adjust the leash to your desired length then re-clip the **buckle** together, making a loop.



You will see that the size of the loop will depend on how long you have made the leash.
Note: You cannot make a traffic handle when the leash is adjusted to the shortest length.

Tether length:



To adjust the **tether length** (distance from the loop to your pet):

1. Move the **slide adjuster** away from the **snap hook**

Towards handle

Towards snap hook

2. Move the **male buckle** to meet the **slide adjuster**

*Note: The **slide adjuster** and **male buckle** must ***always*** be together to prevent slipping

Hands-Free "Around the Waist" or "Over the Shoulder", and Tether:

The loop that goes around your shoulder, waist or stationary object is simply an "enlarged" traffic handle. So follow the **traffic handle** instructions and make the loop large enough to fit.

You can fine tune the size of the loop after putting it on, by moving the **slide lock** up and down the leash.

****Safety notes while wearing:**

-The Hands-free options should only be used with a pet whose temperment you are familar with. Unexpected pulling from your pet may cause you to fall.

-Keep in mind that the **buckle** is what is keeping the loop together. If for any reason you need to quickly release yourself from the leash, simply **unclip the buckle** to release.

These are just a few of the basic configurations, but you may be able to come up with a new combo, or use! We suggest practicing with the leash and your petat home before venturing out.
